

Jordan Rivera

jordan.rivera.dev@example.com | (555) 019-2837 | github.com/jrivera-dev

Education

B.S. in Computer Science, Riverbend State University, 2021-2025, GPA 3.7/4.0

Skills

Python, TypeScript, Java, SQL, React, FastAPI, Django, Docker, AWS (EC2, S3, Lambda), PostgreSQL, Redis, Git, LangChain, REST API design, CI/CD (GitHub Actions), pytest

Experience

Software Engineering Intern — Northlake Data Co. (Summer 2024)

Built a FastAPI service that ingested streaming sensor data into PostgreSQL, cutting average query latency by 40% through indexing and caching with Redis. Wrote pytest suites covering the ingestion pipeline and added them to a GitHub Actions CI workflow.

Web Developer, Part-Time — Cedarline Student Media (2023-2024)

Rebuilt the campus news site's front end in React and TypeScript, replacing a legacy jQuery codebase. Deployed to AWS S3 + CloudFront and set up a Lambda-based contact form handler.

Projects

AutoTrack — Personal Finance Tracker

Django + PostgreSQL web app for tracking recurring subscriptions and spending trends, with a React dashboard and Dockerized local dev environment. Used by ~50 classmates.

PromptBench — LLM Evaluation Harness

Python CLI tool (built with LangChain) that runs a suite of prompts against multiple LLM providers and scores responses against reference answers for regression testing.
